

Anti-Resoiling Demonstration

In a laboratory study, Spot Chomp with Tetraflex™ was compared to two leading national brands of carpet spot cleaning formulations to demonstrate the outstanding soil protection imparted to carpet and upholstery. Using ASTM Method 6540*, three samples were tested for re-soiling properties. Two test samples were prepared by treating one half of each with Spot Chomp with Tetraflex™ cleaning formulations using a spray application. The other half of each test sample was treated with one of two leading national brands respectively. A third sample of untreated carpet was included as a control. The results are pictured below.

Leading National Brand
One

Leading National Brand
Two

The study above reflects the outstanding re-soiling protection imparted to carpet that has been cleaned using proprietary Spot Chomp with Tetraflex™ technology. In addition to offering this high level of protection, the products outperform all leading nationally branded formulations in cleaning efficacy.

Features and Benefits

- Outstanding spot and traffic lane soil removal where low moisture is a key factor
- Enhances anti-resoiling properties using proprietary technology
- Encapsulates organic and particulate soils to enhance vacuum cleaner efficiency
- Preserves appearance of carpet by reducing cleaning frequency
- Environmentally responsible formulation can be marketed globally without restriction
